

Inventory Module

The Inventory Module is ideal for companies looking to track product inventory levels. This module will track inventory at a single location or across multiple sites.

Inventory Features:

- Define storage locations with min/max capacities and warnings for bins, silos, hoppers, railcars, flat storage, plus more.
- Setup scale types: truck scale, belt scale, rail scale
- Setup customer accounts
- Setup material types
- Assign customer accounts and materials to a storage location with the ability to filter on each type
- Automatically update inventory totals when processing scale transactions
- Synchronize remote sites with a central database to provide management visibility to all site locations
- Provide storage location history in order to show past usage
- Configurable to customer's needs - AWS reviews each customer application and specifically configures the Inventory Module to meet those needs

Storage Location Setup Form
