

K-3™ Kiosk

Weatherproof, Mountable Remote Data Collection System

Why do you need a K-3 System?

The K-3™ kiosk is a self-contained data collection system that is designed specifically for those sites that require a flexible data collection terminal. It can either be mounted inside the scale house or outside on a post or pedestal near the scale.

The K-3 allows drivers to process automatic transactions using the Interact® software. Database tables such as Truck, Job and Material can be updated locally with admin permissions. With an internet connection, these tables can be managed remotely with the DataSync Module.

Return On Investment

- Eliminates the need for a scale operator - free staff for other duties
- Improve cash flow by collecting timely ticket data and faster invoice cycles.
- Quick access to job totals by office and field staff allows for more efficient production and planning
- Reduces costs/errors associated with manual entry of tickets into billing system
- Inventory control/tracking
- Ability to control gates and other peripherals

2100 Olson Drive
Chippewa Falls, WI 54729
