

## Gerke & Sons, Inc. (Tomah, WI)

### PRODUCT

K-2 Kiosk™ with Interact® Pro software and cellular network interface.

### CHALLENGE

Gerke & Sons needed to collect scale ticket data from remote frac-sand and gravel-pit operations 24/7. These sites did not have access to phone lines for communication purposes. Also, Gerke & Sons wanted a data collection system that was portable so they could move it from pit to pit as needed.

Truck Scale with mounted K-2 Kiosk

K-2 Kiosk Mounted at Truck Scale

Transaction Processing on K-2 Kiosk

### SOLUTION

With the installation of the Interact Pro software at the main office and portable K-2 kiosks at three remote pits, Gerke & Sons is able to run their business more efficiently and collect data faster, resulting in improved cash flow.

Each system includes a cellular network interface to allow the office to send updated job, material and truck database information to each site on a daily basis. At the same time, the previous day's transactions are downloaded from the site to the office.

These data collection systems have allowed Gerke & Sons to efficiently expand their business from a single site operation to one that manages several pit sites.
