

# Full Import/Export Module

The Import/Export Module is ideal for companies using Interact® on multiple PCs when the ability to add or modify database tables (truck, job or material) is needed away from the main PC where the database resides.

- All tables (jobs, materials, trucks) can be added to, modified or deleted from any PC enabled with the Full Import/Export Module. This is very useful when the main scale PC is too busy being used to weigh trucks and it is more efficient for other staff members to make the changes. Quite often, dispatch personnel, as well as the accounting staff, require the ability to add/modify/delete these tables, therefore requiring the Full Import/Export Module.
- This module eliminates error-prone double entries that occur when different users have to make changes to the same database tables from multiple PCs.

*Changes made in Interact® on your office PC...*

*...can be exported to the scale PC with the Full Import/Export Module!*
