Customer Profile

Michels Materials (Brownsville, WI)

PRODUCT

K-2
OUR STUFF WORKS

K-2 Kiosk

CHALLENGE

Michels Materials is a large aggregate producer that operates several dozen small to mid-sized pits and quarries in WI and MN. Michels had the problem of ticket data getting back to the office in a timely and accurate manner.

SOLUTION

In 2005, Michels installed six RSA data collection systems. The RSA was a first generation kiosk from AWS. Over the years, Michels installed over thirty systems and outgrew the RSA's capabilities. In 2016, they started installing K-2 systems. The K-2 allowed Michels to seamlessly connect to each site to update database tables (i.e. job, trucks, etc.) and pull transaction data. This data then interfaced with their JWS software to provide a seamless data collection process.
