Remote Printer
Real-Time Ticket Printing

AWS offers two types of Remote Printers specifically designed to speed up the process of weighing a truck. Gas pump style thermal tickets are the most reliable and lowest cost, while card stock tickets provide a more tangible transaction record due to sturdier ticket construction. Both styles provide real-time ticket printing which will improve the efficiency of your business by:

- Allowing office personnel to process scale transactions from their desk and print tickets automatically out at the truck scale
- Reducing costs, liability and wasted time by keeping the driver in his or her truck
- Providing a modular design that allows for easy troubleshooting and field-friendly support

RFID Reader

Remote Printer with optional RFID Reader

RFID Badge

Both Remote Printers are driver-friendly. The ticket can be processed manually by the scale attendant or automatically in cases where Jobs/Orders can be dispatched through Interact® software to each truck prior to the transaction taking place. (Options such as RFID readers are available to identify the truck on the scale.) In either case, once the information is entered into the software, the driver receives their ticket without ever leaving the truck!

Remote Printer Features
- Weather-resistant enclosure
- Quick, simple paper loading

Remote Printer Options
- Thermal gas pump and card-stock style tickets
- Thermostatically controlled heaters/cooling systems
- Industrial intercom system
- Traffic lights
- Badge or RFID readers
- *NEW!* Powder coated poles with truck mirror protection guards
