Signature Capture Module

This module is an option when your customer requires a signature from their driver for the load being hauled. Recalling a ticket for proof of signature the traditional way can take hours as you filter through boxes and boxes of tickets. With the Signature Capture Module, an electronic signature can be recalled and reprinted in a fraction of the time it would take to manually search through hundreds or even thousands of tickets.

- A ticket can be reprinted quickly and easily at any time with the driver's signature on it
- Eliminates mailing or faxing of tickets because tickets can be e-mailed to your customer
- Reprinting tickets is so easy, you can even reprint a copy and mail it with the customer's invoice when needed

Signature pad included.

Image Capture Module

This module allows you to capture and store images with each scale transaction.

- Capture images of the front of a truck and/or license plate, contents of load, etc.
- Select up to two different views per transaction
- Image(s) are stored within each transaction record in Interact®
- AWS supplies a full line of camera systems, digital video recorders, mounting poles, industrial intercom systems, etc.

Camera systems and DVR recorders are also available.
